Education

National Institute of Technology, Manipur	2024 – 2028
Bachelor of Technology in Computer Science and Engineering	CGPA: 8.95
Fiitjee Junior College, Visakhapatnam	Class XII – 92% 2022
Sri Chaitanya Techno School	Class X (CBSE) – 95.6% 2021

Technical Skills

- **Data & ML:** Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Streamlit
- **NLP:** Sentiment Analysis, Text Preprocessing, Feature Extraction
- **Languages:** Python, C, C++, JavaScript, Java
- **Web & Frameworks:** React.js, Node.js, Express.js, HTML, CSS, Tailwind CSS
- **Cloud & Tools:** AWS (S3, CloudFront, IAM, EC2), Git, GitHub, Jupyter Notebook, Vercel
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming

Projects

Last-Mile Delivery Emissions Analyzer *Python, Pandas, Scikit-learn, Streamlit*
Live App — GitHub

- Analyzed 1,000+ last-mile delivery records across 6 Indian cities to identify high-emission routes and logistics inefficiencies using Pandas and Seaborn.
- Trained and compared Linear Regression and Random Forest models; achieved $R^2 = 0.98$ and $MAE = 0.12$ kg with Random Forest for CO₂ emission prediction.
- Built a sustainability recommendation engine that flags top 20% high-emission deliveries and suggests vehicle, route, and time-slot optimizations; quantified **81% emission reduction** from fleet electrification.

Viral-O-Meter — Social Media Post Analyzer *Python, NLP, Sentiment Analysis, Streamlit*
Live App — GitHub

- Built an NLP-powered tool that scores the viral potential of any social media post using sentiment analysis, keyword density, length heuristics, and engagement signals.
- Applied text preprocessing and feature extraction using Python NLP libraries to generate a real-time virality score with instant rewrite suggestions.

Heart Disease Prediction *Python, Scikit-learn, KNN, Streamlit*
Live App — GitHub

- Trained a K-Nearest Neighbours classifier on the Cleveland Heart Disease dataset (13 clinical features); applied StandardScaler preprocessing and serialized model with pickle for deployment.
- Deployed as an interactive Streamlit web app where users input health metrics and receive instant cardiac risk predictions.

Should I Bunk? — Academic Decision Support System *MERN Stack*
Live App — GitHub

- Built a full-stack system that analyzes attendance and deadlines to compute a real-time academic risk score using decision logic with attendance thresholds and deadline urgency.
- Implemented REST APIs with Express.js and MongoDB; deployed frontend on Vercel and backend on Render.

Achievements & Activities

- Selected Contributor — **GirlScript Summer of Code (GSSoC) 2025**; contributed to open-source Python and web projects.
- Participant — **Smart India Hackathon** and multiple national-level hackathons.
- Solved **200+ Data Structures and Algorithms** problems across LeetCode and competitive platforms.
- Member — Coding Club and Innovation Club, NIT Manipur.
